

1. We want to use the values in Price column in one of our formulas. What is the best way to select those values?

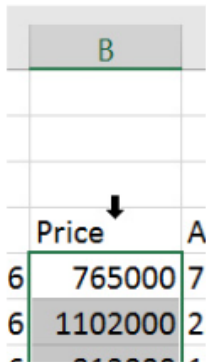

1 / 1 point

☐ Select your data as shown below:

	Price	Ac
16	765000	7 l
16	1102000	23
16	813000	1/

☒ Select your data as shown below:

	Price	A
6	765000	7
6	1102000	2

☐ Select the the cell as below and then press CTRL + A on your keyboard.

	Price	A
6	765000	7
6	1102000	2
6	813000	1

✓ Correct

Yes, make use of this handy feature tables have to offer. This will select all of the data in that column but not the entire column. Refer to the Intermediate I course (Week 5) for a refresher on Tables.

2. Which of the following is a volatile function in Excel?

- ☐ MATCH
- ☐ INDEX
- ☒ INDIRECT
- ☐ IF

✓ **Correct**

Yes, that's right. We are going to look in detail at INDIRECT in Week 5 of this course.

3. Which of the options below is a valid and good practice example for a named range? The example for this range is a column of data containing the sale prices for houses in 2017.

- ☐ slphouses17
- ☐ Sale-Price-Houses 2017
- ☒ SalePriceHouses_2017
- ☐ SPH2017

✓ **Correct**

This is a good name for this particular named range. Excel doesn't care whether you capitalise your names but it helps for readability without adding extra spaces or clutter. The name contains all the vital information you need to identify its source and purpose in the future.
