Sean has asked you to briefly explain to him what a **Slicer** is. What is the best response?

- ☐ **Slicers** are a more efficient way of creating pivot charts and pivot tables.
- ☐ **Slicers** are a very complicated concept that has been added to pivot tables in the newer versions of Excel, it is difficult to understand them and they are arguably pointless.
- ☒ A **Slicer** is a filter that has been made user-friendly and now anyone can use it with ease by just clicking on what they want the spreadsheet to filter by and the pivot table and charts (dashboard) display accordingly.

✓ Correct

Yes, this is great explanation!
