

1. When you are doing a **VLOOKUP**, what is the lookup value?

1 / 1 point

- ☒ This is the value we do know. We want Excel to lookup this value from the table.
- ☐ This is the value that we don't know. We want Excel to return this value from the lookup table.

✔ **Correct**

Yes, that's right. The lookup value is the value we already know.

2. When you are doing a **VLOOKUP**, what is the col_index_num?

1 / 1 point

- ☐ This has to be sometimes specified by the column (e.g. F) for very large datasets.
- ☐ This is the number you specify when you want Excel to lookup a value that is not in the first column.
- ☒ This is the number of the column that contains the value you want Excel to return from the lookup table.

✔ **Correct**

Yes, that's the correct answer - well done.

3. With a range **VLOOKUP** you can look up a value that falls within a given range and return a corresponding value.

1 / 1 point

- ☒ True
- ☐ False

✔ **Correct**

Yes, spot on. VLOOKUPs can seem complicated at first but they are super useful, so don't give up, yet!

4. Which characteristics about the data set that the **table_array** argument points to are important to keep in mind when creating a range **VLOOKUP**?

1 / 1 point

- ☐ The lookup data set that the **table_array** points to should be listed from smallest to largest, the range should be referred to with relative references, and headings should not be included.
- ☐ The lookup data set that the **table_array** points to should be listed in alphabetical order, the range should be referred to with relative references, and headings should be included.
- ☒ The lookup data set that the **table_array** points to should be listed from smallest to largest, the range should be referred to with absolute references, and headings should not be included.
- ☐ The lookup data set that the **table_array** points to should be listed in alphabetical order, the range should be referred to with absolute references, headings should be included.

✔ **Correct**

Yes, that's correct. Keep these characteristics in mind when you build your range **VLOOKUP**.
